Reachy Mini Meetings

Join a meeting through a robot

Dominic Ill · Kevin Stöckli · Simon Thut

Demo: on the real robot

1 **Reachy scans the room**
It looks around and saves what it sees.

2 **Reachy follows the head**
The room stays in place when the user looks around.

3 **Speech appears**
Spoken words show up in a bubble above the head.

What we did and what we solved

Now running in Unity

- Live video in the headset
- Reachy follows your head
- Video stays fixed in the room
- Two-way audio
- Speech bubbles
- Panorama of the room

34 → 72 fps

Frame rate

Chrome halved it with video. Unity keeps 72.

141 ms

Video delay

In the headset over Wi-Fi, real camera.

5× less

Video shake

It caused motion sickness. Now it feels much better.

±3°

Head play

Small moves don't reach the robot. The app now handles it.

Six weeks to the live demo

Nov 2

Midterm

We are here

Nov 3–15

Move to Unity

Translation, speaker following, nods and “I want to speak”

Nov 16–29

Measure

Latency, speaker attribution, language

Nov 30–Dec 11

User study

8–10 people: presence, sickness, comprehension

Dec 14

Final demo

Live meeting in English and German

Jan 11

Report

Results and write-up

If time allows: depth, translated robot voice, notes panel
